

Part used in the modular "XS SYSTEM" designed by BARENCO

BE216

Top pole tilt requires a stand-off clamp to secure tilt pole in a vertical position and BE771 is the correct clamp for this.

There is a number of uses this clamp can be used for, including an inline clamp for two poles with the pinch clamp for scaffold pole and say a 1.5" mast for the 'V' bolt side.

Remember the pinch clamp needs to slide over the end of the pole it is to be secured too.

BE771 Pinch Clamp Notes.

On a 2" or scaffold pole sizes clamp can be used either way round.
Ensure pinch clamp is slid on to pole before you connect both end.

Finish:- Sherardized

BARENCO Ltd.

DRAWN Name	B. Gell	Pinch bolt clamp up to 2" with 'V' bolt
