ROTATOR PLATFORM BRACKETS - YAESU

These brackets enable a (Bell type) rotator to be side mounted onto a static pole.

This increases the stability and reduces the wear on the rotator bearings and so increases life of the rotator. It is necessary to use a top bearing with this system.

The rotator platform brackets are available for Yaesu rotators and fit upto 2" masts, sold in pairs complete with 2" V bolts.

Sherardized Heavy Duty Bracket. Designed and manufactured by BARENCO
