

# **BE623/125**

## **COLINEAR / INLINE CLAMP -1.25"**

Colinear clamp capable of securing 1.25" based colinear aerial to up to 2" mast, or any in line pole. The main advantage for this type of clamp means, that should it work loose the worst thing that will happen is the aerial or pole will slide down the main mast and not "walk round" the mast. Supplied complete with 2" V Bolts and M8 bolts.

The pinch bolt system gives a tighter grip on the pole without crushing the tube.

Designed and manufactured by BARENCO
