

# **BE626/2**

## **SHIPPING CONTAINER BRACKET FOR SATELLITE DISH 48.3MM O.D. X 800MM HIGH**

ISO Shipping container corner bracket support tube 48.3mm x 800mm high to locate a small satellite dish.

No drilling into container and easy to fit. A single central M12 bolt locates a 125mm square base plate with 4 x M10 studs to attach a 48.3mm x 800mm tube welded to second 125mm square plate and finally secured with 4 x M10 nuts and washers.

The simplicity of the design is in the special nut which locates into the cast corner on either of the faces and allows the tube to be mounted in any of three faces on all corners.

It is recommended that the corner used for a dish is the one which will allow the dish to be fitted within the confines of the container and so less likely to be hit or disturbed during daily activities.

Tools required to install the bracket are 1 x M19 and 1 x M17 spanner.

The 48.3mm tube can be increased in height by the addition of a BE612HD mast coupler and the addition of a second scaffold pole.

There is a 3" tube x 800mm high version available BE626/3

Finish: Sherardized

Designed and Manufactured by BARENCO
