GALVANIZED LASHING WIRE

Seven strand 18 gauge wire in 17ft coils suitable for chimney bracket lashing.

The most effective way to use lashing wire is to split the ends approx 4-6" from the end.

Form a loop with the J bolt hook and wrap the seven strands back onto the wire ensuring each strand covers the one before.

Recommended that at least one is done on the ground, so easing installation.

Finish: Galvanized
